

Restorative-Endodontic Interface: Having the Endpoint in Mind Before Starting the Treatment

Presented by:

COURSE OBJECTIVES

This hands-on seminar will discuss advantages of pre-endodontic and post-endodontic restorative techniques, in order to achieve long term successful endodontic outcomes, reduce micro-leakage, and significantly reduce post-op flareups.

Adhesive bonding techniques will be discussed to enhance longevity and predictability of restorative treatment on vital teeth and teeth that are endodontically treated.

4 FREE CEU'S!

Dr. Salehrabi received his dental degree from NY State University at Buffalo and practiced as a restorative dentist for ten years before beginning his Advanced Endodontic Residency at the University Of Southern California School Of Dentistry. He now practices advanced microscopic Endodontics in Denver and also is an Assistant Clinical Professor at USC. His work has been published in the Journal of Endodontics, American Journal of Dentistry, and other peer reviewed dental journals. He is the recipient of the International Federation of Endodontic Associations research award. Dr. Salehrabi has lectured nationally and internationally, most recently at the American Association of Endodontist Annual convention, and the Panamanian Endodontic Society Annual meeting.
